Caterva Iteration 1 Release

Introduction
Our product allows users to create events and share them with friends they have or groups they have created.

Location of our Iteration 1 Requirements:
- **For github milestones:**
  https://github.com/JKayse/Caterva/issues?milestone=2&state=closed
- **For the document:**
  https://github.com/JKayse/Caterva/blob/master/Project_Documents/Iteration%20One%20Requirements.pdf

Features that were not completed in the Iteration 1 Feature Set:
- All website features were completed. We changed some of the details we were planning on. For example, the header no longer displays your name, just welcome. The core functionality is there though.
- For the android, we decided to focus more on layout. Therefore the view friends and groups and sign out functionality does not work. The sign in and sign up functionality works but does not check for valid inputs.

Link to the Android .apk:
https://github.com/JKayse/CatervaAndroid/blob/master/bin/Flock.apk

Link to the production website:
http://54.200.98.199/flock/

Test account login information:
A test account is unnecessary. You would probably want to make several accounts though to test the add friend feature as well as the view friend and group features.

Website Notes:
- At the start, there will be no friends, groups, or friend requests since those are the features we implemented this iteration. The event list and event request list are placeholders. The profile page and event description are also placeholders.
- In the future, users will be able to upload a profile picture. This will replace the flock image used everywhere.

Android Notes:
- To run the android application, the device must run on Ice Cream Sandwich or later.
- Our team decided to put the android code in a separate repository. This is located at:
  https://github.com/JKayse/CatervaAndroid
